CYBER SECURITY MONITORING

Continuous, proactive monitoring of network traffic and log files contributes to early detection of malware, ransomware and other potential malicious activities. Active detection, prior to detection by virus scanners or hackers stealing sensitive data.

TITAN provides the complete solution.

CYBER SECURITY MONITORING

The IT landscape is changing. Targeted threats caused by malicious entities can attack organizations for long periods of time to gain continuous access to sensitive information. In addition companies use and organize their IT in a different manner. Services are often outsourced to third parties resulting in blurred organizational boundaries. Users expect to have 24/7 access to all systems, both internal and external, in addition to being able to work from home in conjunction with usage of mobile phones or tablets (Bring Your Own Device) connected to the company network. Organizations often have difficulty controlling connected systems and their individual behavior on the network. Conventional measures like firewalls and antivirus packages are no longer sufficient to proactively react to potential threats.

Continuous and proactive monitoring of network traffic and log files contributes to early detection of malware, ransomware or any other potential malicious activity. Active detection, even prior to detection by virus scanners or hackers subtracting sensitive data. This unique challenge requires a significant investment by organizations to obtain the service, guarantee quality, and to obtain the right knowledge. Traditional SIEM (Security Incident & Event Monitoring) solutions are, in addition to the substantial investment, complex and labor intensive in management and maintenance. Fortunately, Nováccent is able to provide a complete solution for advanced Cyber Security Monitoring which requires less investment and is less labor intensive.

“ **EVERY ORGANIZATION IS A POTENTIAL TARGET FOR CYBER CRIMINALS. DEALING WITH THESE THREATS REQUIRES SMART STRATEGY AND DEFENSE.** ”

TITAN[®]

...NOVÁCCENT OFFERS THREAT INTEL & ANALYTICS (TITAN), OUR ADVANCED CYBER SECURITY MONITORING SERVICE...

TITAN supports you in proactive monitoring of your network for potential malicious activities such as unauthorized access or potential hacks. Our security specialists monitor and analyze network traffic in conjunction with log files. Together with you they work on isolation and solution of potential threats.

Insights on the latest results, reports and analyses are available in an online portal accessible at any time. Using this powerful service, you will always have control over, and insight into, detected threats.

HOW DOES TITAN WORK?

TITAN is an integral Cyber Security Monitoring Platform providing insight into potential treats.

TITAN COLLECTS POTENTIAL
THREATS WITHIN YOUR NETWORK
VIA RAPID AUTOMATED ANALYSIS.

The power of the monitoring services derives from analysis of network traffic from the Nováccent Security Sensor with smart and flexible correlation of other sources like log files.

Combined sources are analyzed and correlated, supported by our Advanced Analytics platform. This allows for quick and automated detection of malicious threats.

Subsequently the malicious threats are analyzed by our security specialists from different perspectives. Based on knowledge, experience and insight in your organization, the specialists can determine impact and urgency of every threat. After thorough analysis they support you in handling and containing the threat.

“ *The analyses, insights and reports are 24/7 available in our portal, ensuring constant insight in detected events and outcomes.* ”

TITAN

NOVÁCCENT SENSOR

AN ADVANCED AND INTELLIGENT SENSOR FOR DETECTING UNWANTED EVENTS ON THE NETWORK

ADVANCED ANALYTICS PLATFORM

AUTOMATED ANALYSIS OF EVENTS BASED ON LOG FILES AND ADVANCED CORRELATION

SOC ANALYSIS

ANALYSIS OF THREATS BY SECURITY ANALYSTS OF THE NOVÁCCENT SECURITY OPERATIONS CENTER

CYBER SECURITY PORTAL

24/7 INSIGHT IN EVENTS, THREATS AND REPORTS

WORKING TOGHETER - SHARE ANALYSES & THREATS

The power of collaboration. Nováccent offers customers the possibility to share anonymized and fully automated detected threats and analyses with (sector) partners to also benefit from the information of others. This allows for proactive reaction to potential targeted threats as a result from sharing of information. When working and sharing together, threats can be detected at an early stage.

QUICK RESULTS

TITAN starts with a short and fast implementation time of the sensor, which quickly yields the first insights in network traffic. A combined view of threats is created by subsequently adding log files. TITAN does not affect the performance of the corporate network.

Organizations receive a clear picture on what is happening within the IT infrastructure. This also allows for efficient future decision making on IT security.

TITAN – INSIGHT INTO THREATS

- » More resistant to ransomware and similar malware
- » More resistant to other cyber threats
- » Prevent PR damage
- » Prevent data leaks
- » Prevent fraud
- » Meet compliancy guidelines

TITAN is part
of the Nováccent
Novasuite portfolio. A
collection of intelligent IT-Security
products on a single integrated Cyber

Security Platform. In addition to Cyber Security Monitoring we also offer Vulnerability Management
via VAMP (Vulnerability Analytics & Management Portal). The combination of TITAN and VAMP gives you
an integrated Cyber Security Dashboard. A total picture of vulnerabilities and threat landscape combined in
one platform.
